

Schunk Carbon Technology
Maximum usability.
Optimum protection.

Are you interested in 

Core competence - high-performance materials

Schunk Carbon Technology delivers material solutions that redefine boundaries - specially developed for the most demanding military requirements

- > Extreme heat (up to 3,000 °C) and resilience
- > Maximum lightness and dimensional stability
- > Radar-transparent and EMC-compatible

Greater range, longer service life, maximum system reliability.

LEARN MORE 

High temperature applications

Our materials for the most extreme operating conditions:

Carbon Reinforced Carbon (CFC), Carbide (SiC, C-SiC), Durafox Oxide Fiber Composites (OFC)

High strength and rigidity
due to the use of different
carbon fibers depending on
customer requirements

High temperature range
up to 3,000 °C

Resistant to abrasion and corrosion
due to various coating processes such
as PyC or CVD

Low density -
reduction of weight
and thermal mass

**Excellent
thermomechanical
properties**

APPLICATIONS

- > **Rocket**
Propulsion systems, nozzle assemblies,
combustion chambers, hot gas guiding structures
- > **Hypersonic**
Outer cladding, propulsion systems, wing structures,
radomes for high temperature

Lightweight construction

High weight reduces range, mobility and payload. Schunk offers the optimal solution: tailor-made fiber-reinforced plastics - for maximum performance on land, at sea and in the air.

Fiber-reinforced plastics
unlimited selection of fibers according to customer requirements (e. g. carbon, glass, aramid, ...)

High temperature range
up to 300 °C

Weight saving potential
of up to 80 % compared to steel and 40 % compared to aluminum

Radar transparency

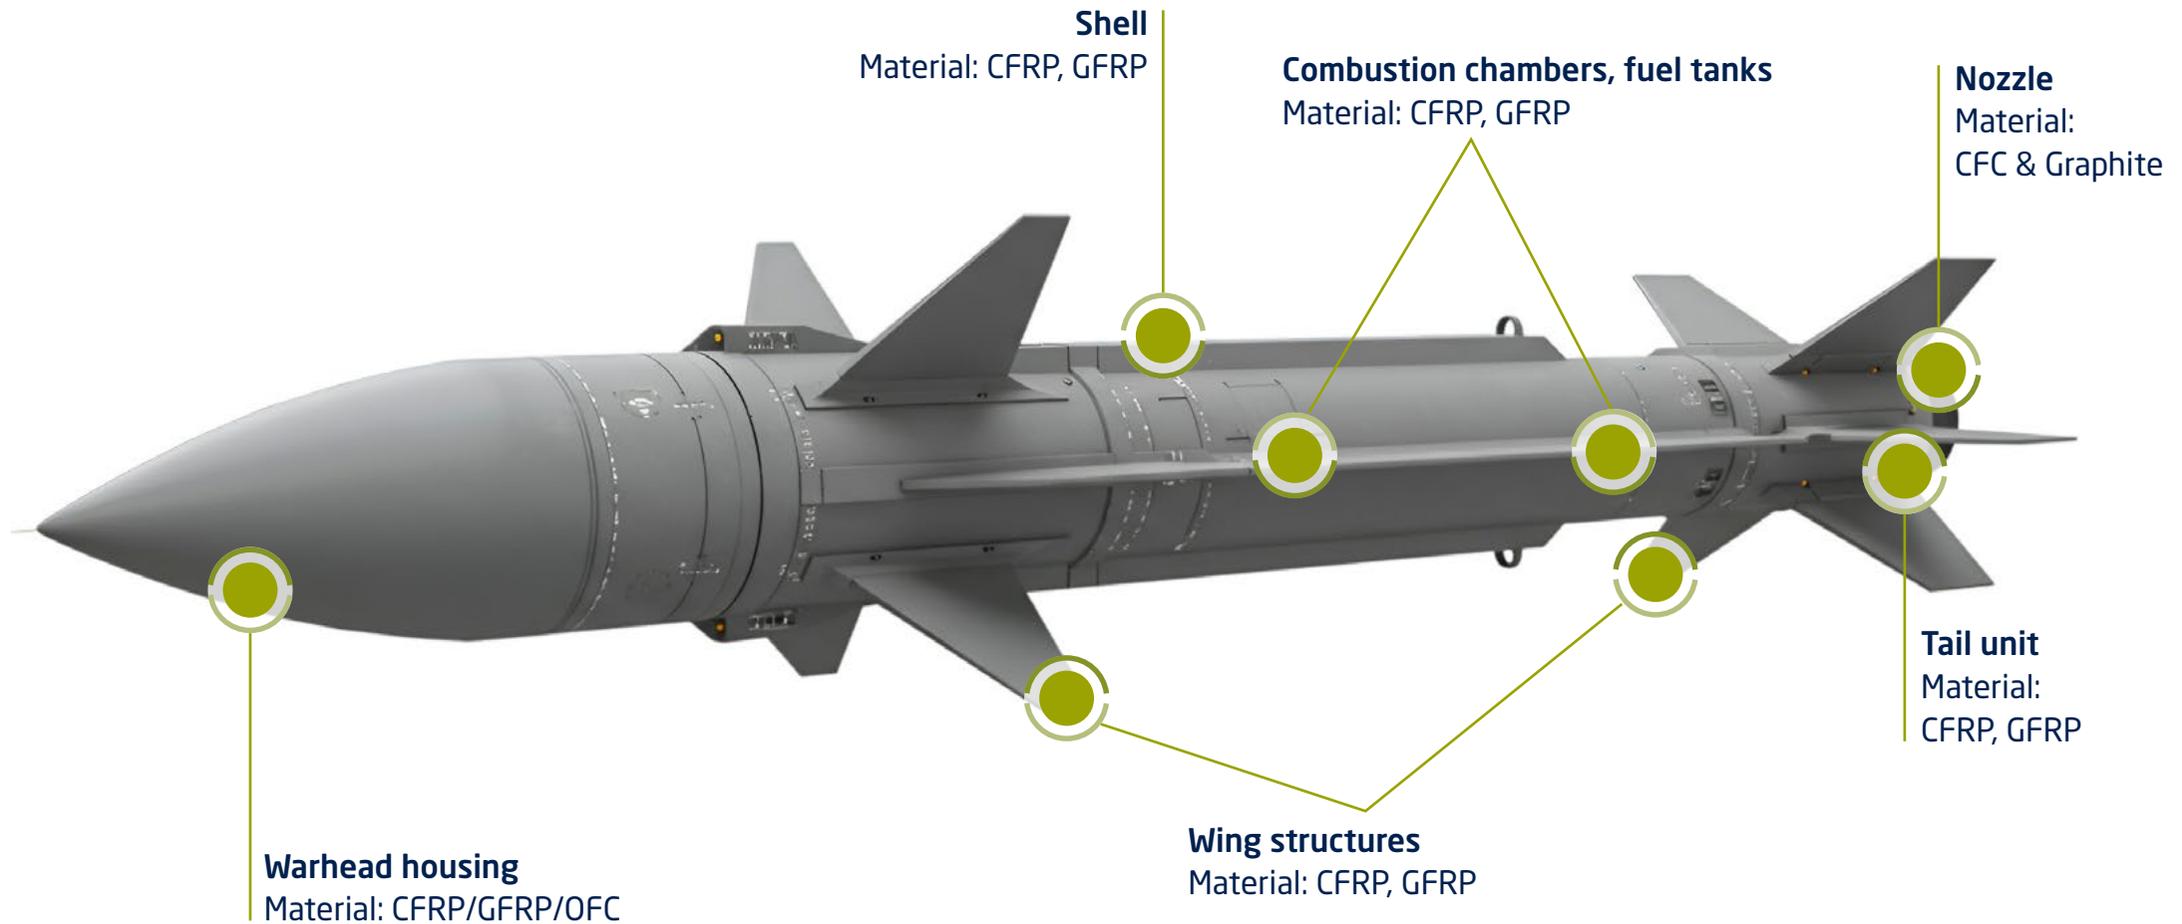

APPLICATIONS

- > **Rocket**
Wing structures, combustion chambers, radomes
- > **UAVs**
Housings, support structures, wings, radomes
- > **Land vehicles**
Housings and support structures without ballistic properties, radomes

Applications

Solutions for rockets and missiles

Solutions for rockets and missiles

ADVANTAGES

- > Light weight construction for range extension and higher payload
- > High stiffness and tensile strength for high pressure and precision during launch
- > Temperature range from -40 °C up to 300 °C (1,000 °C for OFC, 3,000 °C for CFC and Graphite)
- > Large scale production
- > Low radar reflection via coating possibilities
- > Painting and coatings according to NATO-MIL-STD & SPEC

Warhead housing

Material: CFRP/GFRP/OFC

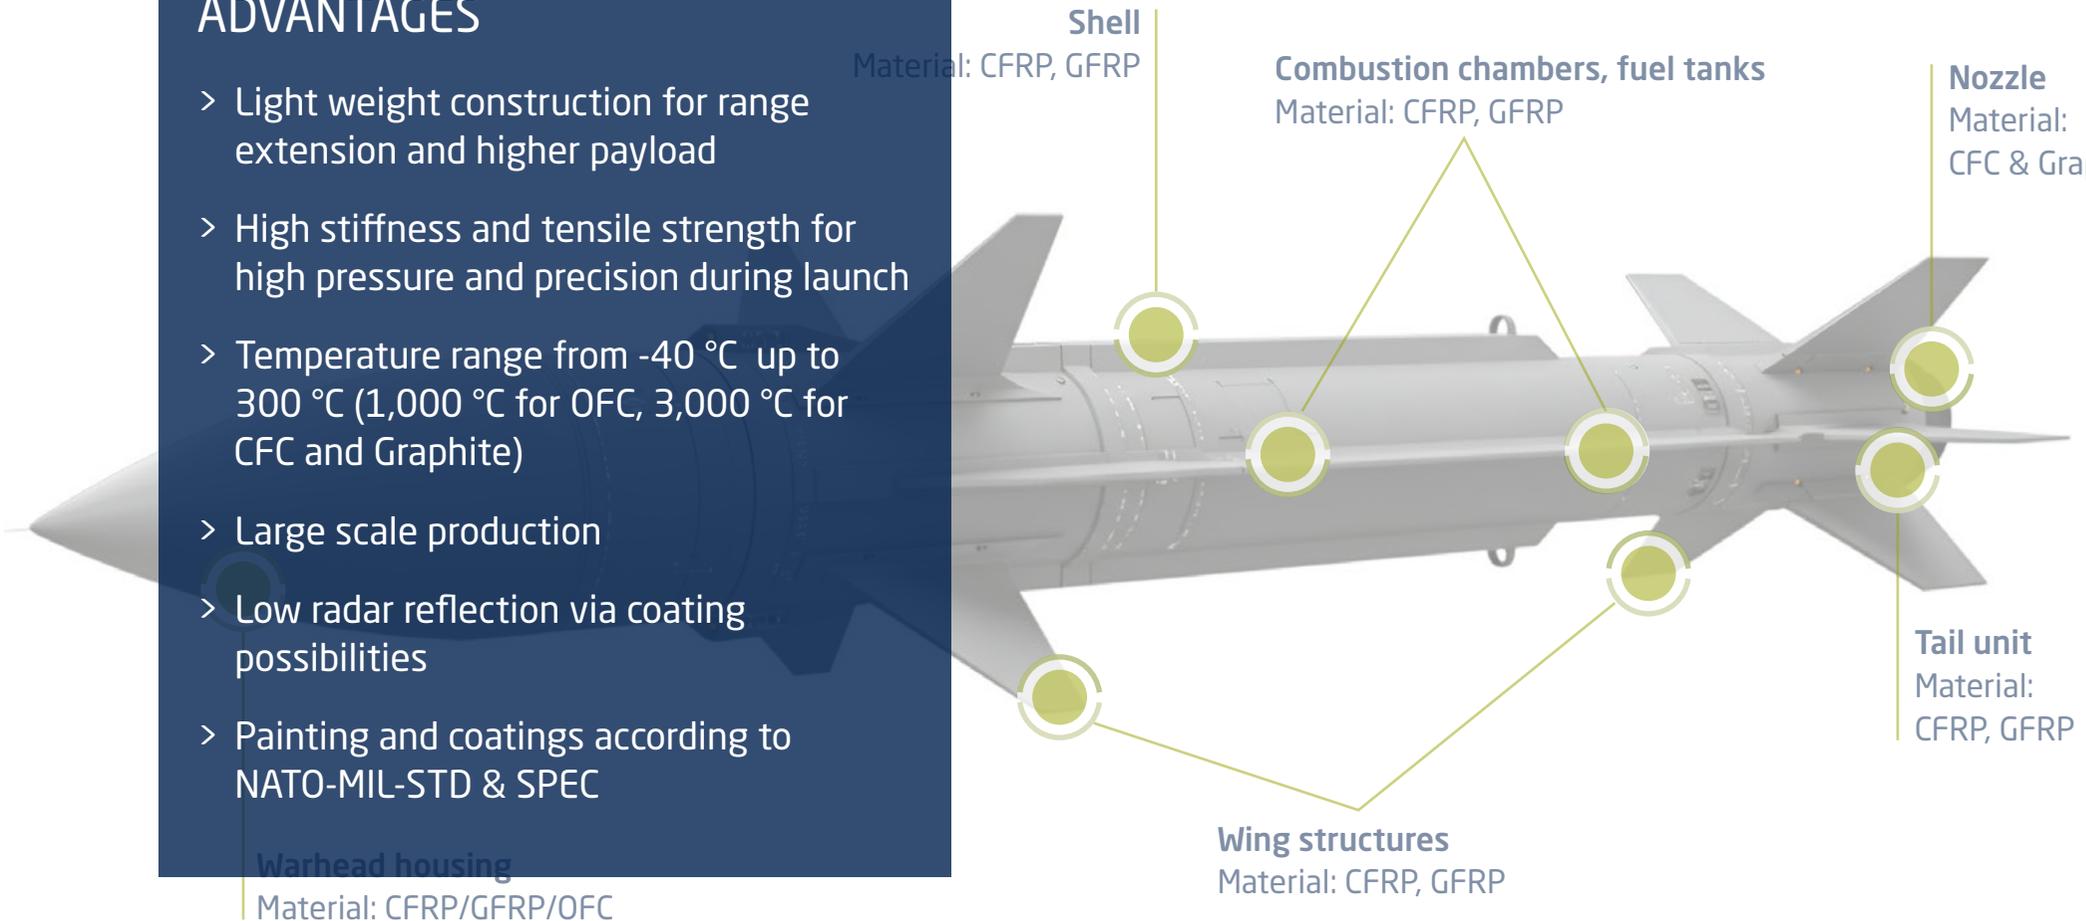

Shell
Material: CFRP, GFRP

Combustion chambers, fuel tanks
Material: CFRP, GFRP

Nozzle
Material:
CFC & Graphite

Tail unit
Material:
CFRP, GFRP

Wing structures
Material: CFRP, GFRP

Anti-tank systems - launchers and missiles

Example Tail unit

Launcher

Material: CFRP/GFRP

Missile

Material: CFRP - Tail unit | Wings |
Housing | Combustion chambers
GFRP - Shell
CFC & Graphite - Nozzles

Anti-tank systems - launchers and missiles

Example Tail unit

Launcher

Material: CFRP/GFRP

Missile

Material: CFRP - Tail unit | Wings |
Housing | Combustion chambers
GFRP - Shell
CFC & Graphite - Nozzles

ADVANTAGES

- > Light weight construction for range extension and higher payload
- > High stiffness and tensile strength for high pressure and precision during launch
- > Temperature range from -40 °C up to 300 °C (3,000 °C for CFC and Graphite)
- > Large-scale production
- > Low radar reflection via coating possibilities
- > Painting and coatings according to NATO-MIL-STD & SPEC

Components for land vehicles

Housings

Material: CFRP/GFRP
(Non ballistic)

Launcher tubes

Material: CFRP/GFRP
(Non ballistic)

Window and door frames

Material: CFRP/GFRP
(Non ballistic)

Components for land vehicles

Housings

Material: CFRP/GFRP
(Non ballistic)

Launcher tubes

Material: CFRP/GFRP
(Non ballistic)

Window and door frame

Material: CFRP/GFRP
(Non ballistic)

ADVANTAGES

- > Light weight construction for range extension and higher payload
- > High tensile strength, stiffness and impact strength
- > Temperature range from -40 °C up to 300 °C (3,000 °C for CFC and Graphite)
- > Large scale production
- > Low radar reflection via coating possibilities
- > Painting and coatings according to NATO-MIL-STD & SPEC

UAV technology

**Housings, wings, rotor blades,
structural elements & randsoms**
Material: CFRP, GFRP

**Housings, wings, rotor blades,
structural elements**
Material: CFRP, GFRP

UAV technology

Housings, wings, rotor blades,
structural elements & radoms
Material: CFRP, GFRP

ADVANTAGES

- > Light weight construction for range extension and higher payload
- > High stiffness, tensile strength and fatigue strength
- > Temperature range from -40 °C up to 300 °C
- > Low radar reflection via coating possibilities
- > Painting and coatings according to NATO-MIL-STD & SPEC

Housings, wings, rotor blades,
structural elements
Material: CFRP, GFRP

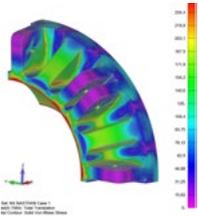

Schunk offers maximum supply reliability

- › **Fully European supply chains**
(independent of geopolitical risks)
- › Reliable spare parts supply and maintenance
over the entire product life
- › **High-temperature processes** (carbonization, graphitization)
and **state-of-the-art coatings** (CVD, PyC)
- › **Fiber composite processes:**
 - Wet filament winding
 - Laser-assisted tape laying and winding
 - Autoclave process
 - Hot and wet pressing
 - Resin transfer molding (RTM)
 - Sheet molding compound (SMC)
 - Vacuum infusion (VI)
 - 3D printing

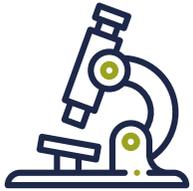

Development expertise – from prototype to series

We shorten development times and ensure product quality.

Finite element analyses (FEA)

Modern laboratories and measuring rooms

**Flexible and scalable production processes
(small to large series)**

High development expertise

100+ years - your partner for innovation and quality

Long-term **INVESTMENTS**
without short-term profit targets

Decades of **PLANNING SECURITY**
for military procurement

Guaranteed **SECURITY OF SUPPLY**
over the entire product service life

THE SCHUNK GROUP

The Schunk Group is an international technology group with more than 10,000 employees in 26 countries. The company is a leading supplier of products made of high-tech materials – such as carbon, technical ceramics and sintered metal – as well as machines and systems – from environmental simulation to air conditioning technology and ultrasonic welding to optical machines.
